Coastal Waters Gallery
Royal British
Columbia Museum
Victoria, British Columbia

Completed: 1992
Square Footage: 10,000 sq.ft.
Budget: \$6.5 million USD (Projected)

Scope of Work: Interpretive Planning, Concept and Schematic Phase, Fundraising (Physical Model and Visualizations).

Departing from traditional presentation methods, this gallery design offers dramatic examples of marine life on the coast. There is a special emphasis on biodiversity and human interaction with the environment and how to resolve or improve existing environmental problems. Interactive study stations were designed as an integral method of interpretation, both within the exhibit experience and in specific lab areas designated for wet work. The project was put on hold at the end of the Schematic Phase.
